

Website Status Checker - Project Report

This project demonstrates a Website Status Checker using HTTP requests. The report contains website URLs and their corresponding HTTP status codes. The objective is to verify whether websites are online, redirected, or unavailable.

Request URL	# Redirects	Status Code	URL	Error Message
https://google.com	1.0	301.0	https://google.com	
		200.0	https://www.google.com/	
https://youtube.com	1.0	301.0	https://youtube.com	
		200.0	https://www.youtube.com/	
https://facebook.com	1.0	301.0	https://facebook.com	
		400.0	https://www.facebook.com/	
https://instagram.com	1.0	301.0	https://instagram.com	
		200.0	https://www.instagram.com/	
https://twitter.com	1.0	301.0	https://twitter.com	
		200.0	https://x.com/	
https://x.com	0.0	200.0	https://x.com	
https://linkedin.com	1.0	301.0	https://linkedin.com	
		200.0	https://www.linkedin.com/	
https://github.com	0.0	200.0	https://github.com	
https://stackoverflow.com	0.0	403.0	https://stackoverflow.com	
https://wikipedia.org	0.0	429.0	https://wikipedia.org	
https://amazon.in	1.0	301.0	https://amazon.in	
		202.0	https://www.amazon.in/	
https://flipkart.com				Connection to the server hosting the URL fails.
https://microsoft.com	1.0	301.0	https://microsoft.com	
		200.0	https://www.microsoft.com/	
https://apple.com	1.0	301.0	https://apple.com	
		200.0	https://www.apple.com/	
https://netflix.com	1.0	301.0	https://netflix.com	

Conclusion: The Website Status Checker project helps users verify website availability using HTTP status codes. It is useful for web monitoring and basic network diagnostics.
